

课程项目编程

已完成部分：

读卡器部分截图：

未 插 卡 时 :

插 卡 后 :

```
C:\Qt\Qt5.7.0\Tools\QtCreator\bin\qtcreator_process_stub.exe
版本号:
5
初始化端口成功!
设置读卡器天线状态成功!
设置卡的状态成功!
寻找卡成功!
设置LED灯成功!
控制蜂鸣器响成功!
防碰撞成功!
卡号为:
BB5A67BB
激活卡成功!
验证密钥成功!
```

```
C:\Qt\Qt5.7.0\Tools\QtCreator\bin\qtcreator_process_stub.exe
版本号:
5
初始化端口成功!
设置读卡器天线状态成功!
设置卡的状态成功!
寻找卡成功!
设置LED灯成功!
控制蜂鸣器响成功!
防碰撞成功!
卡号为:
BB5A67BB
激活卡成功!
验证密钥成功!
读卡成功!
卡中数据为:
0B670QZ
```

```
C:\Qt\Qt5.7.0\Tools\QtCreator\bin\qtcreator_process_stub.exe
版本号:
5
初始化端口成功!
设置读卡器天线状态成功!
设置卡的状态成功!
寻找卡成功!
设置LED灯成功!
控制蜂鸣器响成功!
防碰撞成功!
卡号为:
BB5A67BB
激活卡成功!
验证密钥成功!
读卡成功!
卡中数据为:
我叫付树秋
成功写入数据 "我是付树秋"
```

若不按工作流程读卡:

```
C:\Qt\Qt5.7.0\Tools\QtCreator\bin\qtcreator_process_stub.exe
版本号:
5
初始化端口成功!
设置读卡器天线状态成功!
设置卡的状态成功!
防碰撞失败!
卡号为:
002E0寻找卡成功!
设置LED灯成功!
控制蜂鸣器响成功!

激活卡失败!
读卡失败
-
```

自定义函数

```

14 public:
15     //自定义函数
16     //获取动态库的版本号
17     int currentLibraryVersion();
18     //初始化端口
19     int intialPort(int port);
20     //关闭串口
21     int closePort();
22     //设置读卡器天线状态
23     int setAntennaState();
24     //设置LED指示灯
25     int setLED(unsigned char col);
26     //读取读写卡器型号及产品型号
27     int getModel();
28     //控制蜂鸣器响
29     int controlBeep(unsigned char time);
30     //寻找卡
31     int findCard();
32     //防冲撞
33     int anticoll(unsigned char pSnr[], unsigned char &pLen);
34     //激活卡
35     int selectCard();
36     //设置工作状态
37     int setWorkType();
38     //验证密钥
39     int authentication(unsigned char block);
40     //读取数据
41     int readData(unsigned char Data[], unsigned char &Len);
42     //写入数据
43     int writeData();

```

声明动态链接库中函数

```

44 private:
45     //从动态链接库里面加载的函数
46     //获取动态库的版本号
47     typedef int (*Lib_Ver)(unsigned int *pVer);

283 }

```

前端部分:

前端（部分界面、代码、输出）:

登录:

```
//验证账号
void Login::on_LoginPushButton_clicked()
{

    getUserNameAndPassFromWidget();

    if(checkInputIsEmpty())
    {
        errorMessage("账号密码不能为空!");
        return;
    }

    QJsonObject json;
    json.insert("MessageType", "Login");
    json.insert("UserNo", userName);
    json.insert("UserPass", userPass);

    QJsonDocument document;
    document.setObject(json);
    QByteArray byteArrayFromJson =
document.toJson(QJsonDocument::Compact);

    qDebug() << "登录";
    qDebug() << byteArrayFromJson;
```

```

        service->sendMessage(byteArrayFromJson);
    }
}

```

验证账号密码的正确:

```

//检验账号密码正确
bool Login::checkInputIsEmpty()
{
    return userName.isEmpty() || userPass.isEmpty();
}

```

测试输出

登录

```

{"MessageType":"Login","UserNo":"111111","UserPass":""}

```

发送消息:

```

{"MessageType":"Login","UserNo":"111111","UserPass":""}
\r\n

```

收消息:

```

{"Result":"false","MessageType":"Login"}\r\n

```

```
//库存查询
void QueryResult::obligationResult()
{
    setWindowTitle("库存查询");
    if(json.contains("Quantity"))
    {
        int count = json["Quantity"].toInt();
        for(int i = 0; i < count; ++i)
        {
            QString str("");

            if(json.contains(QString("Commint" + QString::number(i))))
            {
                qDebug() << QString("Commint" + QString::number(i));

                QJsonObject obj = json[QString("Commint" +
                QString::number(i))].toObject();
                if(obj.contains("depotNo"))
                    str += QString("仓库编号: ") +
obj["depotNo"].toString();

                if(obj.contains("goodsName"))
                    str += QString("名字: ") +
obj["goodsName"].toString();

                if(obj.contains("goodsSum"))
```

```

        str += QString("库存: ") +
QString::number(obj["goodsSum"].toInt());

        if(obj.contains("goodsPrice"))
            str += QString("价格: ") +
QString::number(obj["goodsPrice"].toInt());

        if(obj.contains("goodsWeight"))
            str += QString("重量: ") +
QString::number(obj["goodsWeight"].toInt());

        ui->textEdit->append(str);
    }
}
}
}

```

测试输出:

发送消息:

```
"{"MessageType":"Query","QueryType":"Obligation"}\r\n"
```

收消息:

```
"{"QueryType":"Obligation","Quantity":2,"Commint1":{"depotNo
":"NO.1","goodsSum":1,"goodsPrice":7,"goodsWeight":6,"goods
No":"0","goodsName":"B"},"MessageType":"Query","Commint0\

27                 list.add(g);
28             }
29         } catch (SQLException e) {
30             // TODO Auto-generated catch block
31             e.printStackTrace();
32         }
33     }
34 }

```

数据添加:

```

1 package cn.com.service;
2
3 import java.util.ArrayList;
4
5 public class AddSever {
6
7     public String tableAdd(JSONObject jsonObjFromClient, JSONObject json){
8         InOrOutInfoDAOImpl dao = new InOrOutInfoDAOImpl();
9         GoodsInfoDAOImpl daog = new GoodsInfoDAOImpl();
10         SupplierInfoDAOImpl daos = new SupplierInfoDAOImpl();
11         String jsonString = null;
12         if(dao.validateByInOrOutNo(jsonObjFromClient.getString("BatchNumber")) == false){
13             InOrOutInfoBean iob = new InOrOutInfoBean();
14             iob.setInOrOutNo(jsonObjFromClient.getString("BatchNumber"));
15             iob.setInOrOutType(jsonObjFromClient.getString("MessageType"));
16             iob.setUsername(jsonObjFromClient.getString("OperatorName"));
17             List<InOrOutGoogsBean> list = new ArrayList<InOrOutGoogsBean>();
18             for(int i = 0; i < jsonObjFromClient.getInt("Quantity"); i++){
19                 JSONObject jsoncon = new JSONObject();
20                 jsoncon = jsonObjFromClient.getJSONObject("Commodity" + i);
21                 InOrOutGoogsBean iog = new InOrOutGoogsBean();
22                 SupplierInfoBean sib = new SupplierInfoBean();
23                 GoodsInfoBean gib = new GoodsInfoBean();
24                 iog.setGoodsNO(jsoncon.getString("ID"));
25                 iog.setGoodsName(jsoncon.getString("Name"));
26                 iog.setGoodsNum(jsoncon.getInt("Count"));
27                 iog.setGoodsPrice(jsoncon.getInt("Price"));
28                 iog.setSumPrice(jsoncon.getInt("Count")*jsoncon.getInt("Price"));
29                 iog.setSupplierNo(jsoncon.getString("SupplierID"));
30                 iog.setSupplierName(jsoncon.getString("SupplierName"));
31
32                 gib.setGoodsNo(jsoncon.getString("ID"));
33             }
34             iob.setGoodsList(list);
35         }
36         jsonString = dao.insertInOrOutInfo(iob);
37     }
38 }

```

登录验证:

```
package cn.com.servers;

import net.sf.json.JSONObject;

public class LoginServer {
    public String UserLogin(JSONObject jsonObjFromClient, JSONObject json){
        UserInfoDAOImpl daou = new UserInfoDAOImpl();
        String jsonString = null;

        if(daou.validateByUserName(jsonObjFromClient.getString("UserNo"), jsonObjFromClient.getString("UserPass")) == true){
            jsonString = "true";
        }else{
            jsonString = "false";
        }

        json.put("Result", jsonString);
        String jstring = JSONUtils.valueToString(json);
        return jstring;
    }
}
```

查询类:

```
import java.util.List;

public class QueryServer {
    public String supplierQuery(JSONObject json){
        SupplierInfoDAOImpl dao = new SupplierInfoDAOImpl();
        List<SupplierInfoBean> list = dao.getAllSupplierInfo();

        int i;
        for(i = 0; i < list.size(); i++){
            json.put("Commint" + i, list.get(i));
        }
        json.put("Quantity", i);
        String jsonString = JSONUtils.valueToString(json);
        return jsonString;
    }
